Based in Ahmedabad, India | Willing to Relocate

Education

- B.Eng in AI and Machine Learning from LJ University

Work History

Founding ML Engineer at RestaurantPilot.ai, Seattle (Remote) *Nov 2025 to Current*

- Built LLM agents and an AI chatbot with RAG and guardrails so answers stay reliable and on topic, from zero to production, using tools like Claude Code and Cursor to ship faster.
- Built RESTful APIs in Django and a TypeScript mobile app that serve the AI features in production, and tuned each call's model and token limits, cutting LLM token usage by 75%.
- Communicated complex technical details to non-technical restaurant owners and worked cross-functionally with the sales team to turn customer feedback into AI features.
- Built an AI voice agent that answers customer calls, with AI safety controls and content filtering against prompt injection, so customers get answers without staff picking up.

Machine Learning Engineer at GET MY SPACE, Ahmedabad *Jan 2025 to Jun 2025*

- Optimized the AI inference pipeline in Python, served through APIs in production with MongoDB, cutting latency so the parking system read number plates in real time.

Projects

Open to Work (Multi-Agent RAG Resume Builder) (GitHub)

- Developed an open-source AI app with FastAPI, RESTful APIs and SQL that writes a tailored resume for each job from GitHub, an existing resume and manual entries.
- Used LangGraph to build an agentic system with RAG, where a judge LLM acts as a guardrail and content filter, sending unsupported claims back before human-in-the-loop approval, so every resume stays evidence-grounded.
- Built an MCP server in Python that exposes the app's tools to AI assistants such as Claude and Cursor, and a LangChain-based in-app assistant that uses them read-only.
- Set up DevOps with Git-based CI/CD pipelines, Docker and Azure infrastructure as code, with automated evals that block any release that lowers output quality.
